AI Usage

Artificial Intelligence tools were used in this project **only as a learning aid**. The AI was consulted to understand concepts, clarify implementation ideas, and suggest possible approaches for certain features such as event filtering, budget calculation, and form validation.

No code was directly copied or submitted from AI tools. All code was written, reviewed, modified, and tested by the student. The final implementation, structure, and design decisions reflect the student's own understanding and effort.

AI assistance was used in a manner similar to online documentation or tutorials and did not replace original work.
